renew your inner glow

PROCEDURES & SERVICES

Biologics

The newest psoriasis treatment using home injections of designer proteins to quiet the immune system.

Botox

A chemical injection that relaxes underlying muscles enough to reduce wrinkles and frown lines

Chemical peels

Solutions applied to the skin to improve skin color, texture, and contour

Laser hair removal

Permanently removing unwanted hair with precision use of a gentle, low-energy laser

Laser skin resurfacing

Carbon dioxide lasers that emit an intense beam of energy that heats and vaporizes damaged skin tissue, smoothing wrinkles and fine lines

Leg vein removal

A sclerotherapy technique that uses injections of medication to remove spider veins

Liposuction

A procedure using a high-pressure vacuum to extract unwanted deposits of fat cells

Microdermabrasion

The removal of the outermost layer of skin cells using abrasion with very fine sand crystals

Mohs micrographic surgery

A cancer treatment that uses microscope-guided removal of thin layers of tumor, so healthy cells are preserved while cancerous cells are destroyed

Phototherapy

Exposure to specific wavelengths of light for a prescribed amount of time to treat a variety of skin conditions

Restylane injections

A natural, synthesized, and fully degradable FDA-approved hyaluronic acid is injected into the skin to create volume and fill wrinkles

Hours and appointments:

Monday–Friday, 8:30am–4:30pm

Wednesday, 8:30am–8:00pm

Saturday, 7:30am–11:00am
